

QUICKSTART GUIDE

How to Use Prevail Concentrate in Livestock Trailer Washes

Step 1: Dilute Prevail™ Concentrate to the Desired Concentration

Can either be diluted with AHP[®] approved equipment or into a container.

AHP1750 Test Strips should be used regularly to confirm proper dilution.

Diagram 1

	SELECT YOUR DILUTION	ADD PREVAIL™ CONCENTRATE	ADD WATER
PRE-SOAK	1:128	32 mL	4 L
DISINFECTION	1:40 5 min contact time	100 mL	4 L

Step 2: Physically Remove Dirt and Debris

- Remove any crates or bedding and ensure that they are cleaned and disinfected.
- With the aid of a shovel or scraper, remove as much debris from the exterior of the vehicle as possible. Be sure to also target the wheels and mud flaps in addition to the vehicle's body.
- Working from front to back, scrape out all organic matter from the interior of the vehicle. In the case of multiple levels, start from the highest level and work downward.

Step 3: Pre-soak with Detergent

- Using a foam gun, apply Prevail Disinfectant using a dilution of 32 mL per 4 L of water (1:128) - see diagram 1 for dilution directions. Start with the exterior of the vehicle, working from front to back, and then proceed to spray down the inside, from bottom to top and from front to back.
- Also, be sure to target loading docks, removable floor panels, wheels and wheel wells.
- Rigorously scrub surfaces to loosen remaining debris.

Step 4: Rinse with Water

- Use a pressure washer (>1000 psi) and if possible, use hot water to rinse off detergent. As with every application, start with the exterior, and proceed to the interior, working from front to back. Be sure to spray the underside of fender wells and vehicle frames.

Step 5: Disinfect

- Apply Prevail Disinfectant, using a dilution of 100 mL per 4 L of water (1:40 - see diagram 1 for dilution directions) to the entire surface in the same manner as used with the cleaner. Allow the disinfectant to remain on the surface for the required contact time.

Step 6: Dry the Entire Vehicle

- Ideally, dry the vehicle with heat and ventilation, or by parking the vehicle on a slope to allow liquid to drip out.

Step 7: Clean and Disinfect the Cab

- Remove all objects inside the cab and vacuum surfaces.
- Using Prevail Wipes, wipe down any surfaces that the driver has touched or handled, including pedals.
- Use a new wipe when the wipe becomes visibly soiled or dry. Allow 1 minute for the disinfectant to reach its contact time.
